Tensioning Equipment

Category: **Power Tools & Workshop Machines** Type: **Short SOP** Priority: **Medium** 3 labs

Covers these lab items: Tensioning equipment

What it is used for

To apply and maintain the specified tension in belts, cables, straps, wires, or other compatible components during assembly or maintenance.

How to handle

- Inspect the tensioning equipment, handles, gauges, jaws, straps, and locking components for wear or damage.
- Confirm that the equipment is suitable for the component, required tension, and rated load.
- Secure the workpiece and set up the equipment according to the manufacturer's instructions before applying tension.
- Increase tension gradually while monitoring the gauge or specified indicator; keep hands and body clear of components that may recoil or release suddenly.
- Lock or release tension using the designated mechanism, then inspect the assembly and equipment before removing it.

Storage

- Release stored tension completely and store clean and dry in a designated equipment area.
- Protect gauges, jaws, straps, and locking parts from corrosion, deformation, and accidental loading.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
