Artery Forceps

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **Medium** 2 labs

Covers these lab items: Artery Forceps

What it is used for

To clamp tissue or blood vessels during clinical or training procedures when used by qualified personnel.

How to handle

- Inspect the forceps for cleanliness, alignment, smooth movement, secure locking, and damage before use.
- Use only for the intended procedure and under appropriate clinical supervision; do not use on a person during training without authorization.
- Maintain aseptic technique and use the required personal protective equipment in clinical settings.
- Grip the intended material gently, engage the locking mechanism only as required, and avoid excessive force.
- After use, handle contaminated instruments as clinical sharps or reusable instruments according to facility protocol and send for approved reprocessing.

Storage

- After approved cleaning, disinfection, and sterilization as required, dry and store the instrument in its designated clean instrument tray or sterile pack.
- Keep sterile and non-sterile instruments separate and follow facility infection-control procedures.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
