Crutch

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **Medium** 2 labs

Covers these lab items: Crutch

What it is used for

To support mobility and reduce weight-bearing on an injured or weak leg when recommended by a healthcare professional.

How to handle

- Inspect the crutch body, handgrip, cuff or underarm pad, adjustment pins, and rubber tip for damage.
- Adjust the crutch to the user's size according to clinical guidance; do not place body weight directly on an underarm pad.
- Teach the user the recommended walking pattern and safe use on level surfaces before attempting stairs or uneven ground.
- Move slowly, check that the rubber tips grip the floor, and avoid wet or slippery surfaces where possible.
- Stop and seek professional adjustment if the crutch slips, causes pain, or feels unstable.

Storage

- Clean and dry the handgrip and contact surfaces according to facility guidance.
- Store upright in a designated dry area where the crutch cannot fall or obstruct walkways.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
