Flight Simulator

Category: **Drones & Aviation** Type: **Short SOP** Priority: **Medium** 2 labs

Covers these lab items: RC Flight Simulator

What it is used for

To practise basic aircraft or RC flight controls and procedures in a simulated environment without operating a real aircraft.

How to handle

- Inspect the computer, controller, cables, software, and display for safe operation.
- Launch the approved simulator and select the correct aircraft model, control layout, and training scenario.
- Calibrate the controller and verify that control inputs respond correctly before beginning the exercise.
- Follow the instructor's scenario and practise take-off, flight control, orientation, and landing procedures as applicable.
- Save training progress if required, exit the software properly, and disconnect equipment safely.

Storage

- Shut down the simulator software and equipment according to the operating procedure.
- Store controllers and accessories in a labelled, dry cabinet and protect cables from bending or crushing.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
