Leak Detector

Category: **Electrical & Electronic Test Instruments** Type: **Short SOP** Priority: **Medium**

2 labs

Covers these lab items: Leak Detector

What it is used for

To identify leaks in compatible systems, such as refrigerant, gas, or pressurized lines, using a detector designed for the specific substance.

How to handle

- Inspect the detector, probe, hoses, display, and battery or power supply for damage.
- Confirm the detector is compatible with the suspected substance and follow its manual and applicable safety procedure.
- Check calibration or perform the specified function test before use, if required by the manufacturer.
- Scan the suspected leak area using the recommended distance and speed; keep the probe away from liquids or surfaces unless the device is designed for contact.
- Treat an alarm or positive reading as an indication requiring further verification; isolate hazards and follow the relevant emergency or maintenance procedure.

Storage

- Switch off the detector, clean the probe according to the manual, and replace protective caps.
- Store in its case in a dry, secure place; maintain calibration records and batteries as recommended.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
