Covers these lab items: Motherboard Diagnoser

What it is used for

To assist in diagnosing computer motherboard startup or hardware faults by displaying diagnostic codes on compatible systems.

How to handle

- Inspect the diagnostic card, connector, display, and pins for damage; confirm compatibility with the motherboard and slot type.
- Shut down the computer, unplug the power supply, and follow electrostatic discharge precautions before installing the card.
- Insert the card into the specified compatible slot in the correct orientation without forcing it.
- Reconnect power and start the system only after checking that the card and all connections are secure.
- Record displayed codes and consult the motherboard or card manual; power down and unplug before removing the card.

Storage

- Remove the card using ESD-safe handling and protect its connector pins.
- Store in an antistatic bag or case in a dry location away from dust and impact.
