Propeller Balancer

Category: **Drones & Aviation** Type: **Short SOP** Priority: **Medium** 2 labs

Covers these lab items: Magnetic Propeller Balancer

What it is used for

To check whether a compatible drone or model-aircraft propeller is balanced before installation and operation.

How to handle

- Inspect the balancer base, shaft, magnetic supports, and propeller for damage or contamination.
- Remove the propeller from the aircraft and ensure the motor or power source cannot start accidentally.
- Mount the propeller on the balancer using the correct adapter and ensure it can rotate freely without rubbing.
- Observe which side settles downward and follow the propeller manufacturer's balancing method to make adjustments gradually.
- Recheck the balance and inspect the propeller for cracks or deformation; never use a damaged propeller.

Storage

- Remove the propeller and clean the balancer and its shaft carefully after use.
- Store in a protective case in a dry place and keep the shaft and magnetic supports free from impact and debris.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
