Saw Setting Pliers

Category: **Hand Tools - Fastening & Gripping** Type: **Short SOP** Priority: **Medium** 2 labs

Covers these lab items: Diwad Plier / Saw teeth setting plier

What it is used for

To adjust the set of compatible saw teeth so the saw cuts cleanly with appropriate clearance.

How to handle

- Inspect the pliers, adjustment stops, jaws, and pivot for wear, cracks, or looseness.
- Confirm that the pliers are suitable for the saw type and tooth size; consult the saw manufacturer's guidance.
- Secure the saw blade in a stable holder with the teeth accessible and wear eye protection.
- Adjust teeth gradually and consistently, following the required alternating set pattern; avoid excessive bending.
- Check the tooth alignment and test the saw cautiously on scrap material before normal use.

Storage

- Wipe the pliers clean and dry and check the adjustment mechanism after use.
- Close the jaws if appropriate and store in a dry tool cabinet away from moisture and impact.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
