Scale Ruler

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 2 labs

Covers these lab items: Triangular scales

What it is used for

To measure or draw scaled dimensions on technical drawings using the correct scale face.

How to handle

- Inspect the ruler edges, scale markings, and body for cracks, chips, fading, or distortion.
- Identify the drawing scale and select the matching scale face before measuring.
- Align the zero or reference mark with the drawing point and read the graduation straight on to avoid parallax error.
- Use a sharp pencil or suitable drawing instrument without applying excessive pressure to the scale markings.
- Keep the ruler clean and avoid using it as a cutting guide unless specifically designed for that purpose.

Storage

- Wipe clean with a soft cloth and keep the scale markings dry and legible.
- Store flat in a drawing case away from heat, moisture, and heavy objects that could warp it.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
