TDS Meter

Category: **Laboratory Instruments & Glassware** Type: **Short SOP** Priority: **Medium**

2 labs

Covers these lab items: Water testing instrument (TDS meter)

What it is used for

A TDS meter estimates the concentration of dissolved substances in water through electrical conductivity. Use it for comparative water testing, not as proof that water is safe to drink.

How to use

1. Check the meter, display, probe, and battery for damage or low power.
2. Calibrate the meter if required by its instructions.
3. Collect a water sample in a clean container and avoid touching the probe tip.
4. Switch on the meter and rinse the probe as instructed.
5. Immerse the probe to the specified level without touching the container bottom.
6. Wait for the reading to stabilize and record the value with units.
7. Rinse the probe after testing and switch off the meter.

⚠ Safety

- Never immerse the meter body or display unless the device is rated for it.
- Do not taste test samples or assume a low TDS reading means safe drinking water.
- Follow lab hygiene rules when handling unknown or contaminated water.

Care & storage

- Rinse and dry the probe as instructed and store the meter in its protective case.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
