Tube Bender

Category: **Plumbing & Pipe Fitting** Type: **Short SOP** Priority: **Medium** 2 labs

Covers these lab items: Tube Bender; Tube Bender, Tube cutter

What it is used for

A tube bender forms compatible tubing into curves without excessive flattening or kinking. Use the correct bender and tube cutter for the tube material, diameter, and wall thickness.

How to use

1. Check the bender, former, guide, handle, and tube cutter for damage.
2. Measure and mark the required tube length and bend location.
3. Cut the tube squarely with a compatible tube cutter when required.
4. Remove burrs from the cut end and verify the tube fits the bender.
5. Position the tube at the correct mark and align it with the former.
6. Bend gradually to the required angle without forcing the handle.
7. Inspect the bend for cracks, flattening, or kinks before use.

⚠ Safety

- Wear safety glasses and suitable gloves when handling metal tubing.
- Keep fingers away from moving handles, rollers, and pinch points.
- Secure the tool and tube before bending or cutting.
- Do not use damaged cutters or apply excessive force to the tube.

Care & storage

- Remove metal chips, wipe the tool dry, and store it in a clean place.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
