Water Level Indicator

Category: **Electrical & Electronic Components & Kits** Type: **Short SOP** Priority: **Medium**

2 labs

Covers these lab items: Water level indicator

What it is used for

A water level indicator detects or displays the level of water in a tank or container. Install and test it according to its circuit design and operating instructions.

How to use

1. Identify the indicator type and read its wiring or installation instructions.
2. Inspect the sensor, wires, terminals, and housing for damage.
3. Disconnect the power supply before making electrical connections.
4. Connect the sensor and indicator according to the approved circuit diagram.
5. Secure the sensor at the required level and keep connections properly insulated.
6. Restore power and test the indicator using a controlled water-level change.
7. Switch off the supply before adjusting, cleaning, or disconnecting the device.

⚠ Safety

- Never handle exposed electrical connections with wet hands.
- Keep non-waterproof electrical components away from water and splashes.
- Use the correct rated power supply and adult supervision for school projects.
- Disconnect power immediately if wires overheat or insulation becomes damaged.

Care & storage

- Clean the sensor as instructed and store the device with wires protected from moisture.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
