AI Device

Category: **Electrical & Electronic Components & Kits** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Different AI devices

What it is used for

An AI device uses artificial intelligence to process inputs and provide predictions, classifications, or other outputs. Operate it with approved software, suitable data, and appropriate supervision.

How to use

1. Identify the device's function and read its operating instructions.
2. Inspect the power supply, cables, sensors, and connectors for damage.
3. Connect the device to a compatible computer or approved network if required.
4. Open the authorized software and load a suitable sample dataset or input.
5. Run the activity using the provided settings and observe the output.
6. Check results for errors and compare them with expected or verified information.
7. Save required work and shut down the device using the correct procedure.

⚠ Safety

- Do not connect damaged cables or use an unsuitable power supply.
- Do not upload personal, confidential, or sensitive data without authorization.
- Treat AI outputs as suggestions and verify important results independently.
- Keep devices ventilated and away from liquids and excessive heat.

Care & storage

- Keep the device clean, update software through approved channels, and store accessories safely.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
