Abdominal Wheel

Category: **Beauty, Wellness & Fitness** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Abdominal Wheel

What it is used for

An abdominal wheel is a fitness tool used to train the core and abdominal muscles. Use controlled movements on a stable, non-slip surface and within your fitness ability.

How to use

1. Inspect the wheel, axle, handles, and grips for damage or looseness.
2. Place the wheel on a flat, non-slip surface with enough clear space.
3. Kneel on a suitable exercise mat and grip both handles firmly.
4. Keep the abdomen engaged and roll the wheel forward slowly within a comfortable range.
5. Pull the wheel back under control without abruptly arching the lower back.
6. Start with a short range and repeat only while maintaining correct form.
7. Clean the handles and wheel after exercising.

⚠ Safety

- Stop immediately if you feel sharp pain, dizziness, or unusual discomfort.
- Do not allow the lower back to sag or twist excessively.
- Keep the exercise area clear of furniture, pets, and other people.
- Seek professional guidance if unsure whether the exercise is suitable for you.

Care & storage

- Wipe the wheel and grips dry after use and store away from direct heat.
