Barometer

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Barometer

What it is used for

A barometer measures atmospheric pressure, which helps observe weather changes. Place it correctly and allow the reading to stabilize before recording measurements.

How to use

1. Identify whether the barometer is digital, aneroid, or another type.
2. Inspect the instrument, display, dial, and housing for damage.
3. Place the barometer in a stable location away from direct heat and strong airflow.
4. Allow the instrument to settle according to its instructions.
5. Read the pressure value and record the units, date, and time.
6. Compare readings over time without moving the instrument unnecessarily.
7. Switch off a digital barometer after use if required by its instructions.

⚠ Safety

- Do not open a sealed barometer or handle any hazardous internal liquid.
- Keep the instrument away from water, impact, and extreme temperatures.
- Use only the specified power supply for digital models.

Care & storage

- Dust the housing gently and store the barometer in a dry, protected place.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
