Casualty Evacuation Kit

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Drill Kits for Casualty Evacuation and Triage Practice

What it is used for

A casualty evacuation kit supports training in casualty movement, triage, and emergency response procedures. Use training equipment under instructor supervision and follow the approved drill plan.

How to use

1. Check the kit inventory, stretchers, straps, labels, and training supplies for damage.
2. Review the drill objectives, roles, evacuation route, and communication procedure.
3. Wear the required PPE and prepare the designated practice area.
4. Use training mannequins or approved simulated casualties for lifting and movement practice.
5. Apply triage labels according to the instructor's scenario and training protocol.
6. Move simulated casualties using the approved technique and coordinated team commands.
7. Count all equipment after the drill and report missing or damaged items.

⚠ Safety

- Do not practise casualty lifting on real injured people without qualified supervision.
- Use safe lifting posture and request enough helpers for heavy loads.
- Keep evacuation routes clear and stop if anyone feels pain or unsafe.
- Clearly identify simulated supplies so they are not mistaken for clinical equipment.

Care & storage

- Clean reusable training equipment after drills and replenish consumables according to the inventory.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
