Combination Set

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Combination set

What it is used for

A combination set provides tools such as a rule, square head, protractor, and centre head for measuring and marking workpieces. Assemble the required components correctly and verify alignment before use.

How to use

1. Inspect the rule, heads, locking screws, and graduations for damage or wear.
2. Select the required head and slide it onto the rule correctly.
3. Tighten the locking screw enough to hold the component securely.
4. Place the tool against the workpiece reference edge or surface.
5. Read measurements at eye level and mark lines using a suitable marking tool.
6. Check squareness or angles against the required reference before cutting or machining.
7. Loosen and remove components carefully and return the set to its case.

⚠ Safety

- Keep fingers away from sharp edges and marking points.
- Do not use a damaged rule or unreadable graduations for precision work.
- Secure the workpiece before marking or checking near machinery.

Care & storage

- Wipe components clean, protect the graduations, and store the set in its case.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
