Concentration Measuring Tool

Category: **Laboratory Instruments & Glassware** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: KOH concentration measuring tools

What it is used for

A KOH concentration measuring tool helps determine potassium hydroxide concentration using the method supported by the instrument. Select a compatible method and follow laboratory chemical-handling procedures.

How to use

1. Identify the instrument type and confirm its range is suitable for the KOH solution.
2. Wear chemical-resistant gloves, goggles, and other required PPE.
3. Inspect the instrument and check calibration or verification status.
4. Prepare the sample according to the approved laboratory procedure.
5. Measure the sample using the instrument's specified method and record the result with units.
6. Rinse or clean reusable parts as instructed to prevent sample contamination.
7. Dispose of KOH waste according to the laboratory's chemical waste procedure.

⚠ Safety

- KOH is corrosive; avoid contact with skin and eyes.
- Never mix chemicals or prepare samples without the approved procedure and supervision.
- Do not use damaged instruments or unlabelled solutions.
- If a spill occurs, alert the supervisor and follow the laboratory spill procedure.

Care & storage

- Clean the instrument as specified and store it dry and protected from chemical exposure.
