Draw Knife

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Draw Knife

What it is used for

A draw knife removes and shapes wood by pulling its blade toward the user along the workpiece. Secure the wood and use controlled strokes with the blade directed away from the body.

How to use

1. Inspect the blade and handles for cracks, looseness, rust, or damage.
2. Clamp the workpiece securely on a stable support.
3. Wear eye protection and position yourself with a clear working path.
4. Grip both handles firmly and keep the blade angle suitable for the wood.
5. Pull the tool in short, controlled strokes while keeping the blade away from your body.
6. Stop before repositioning the workpiece or clearing wood shavings.
7. Clean the blade carefully and store the tool with its edge protected.

⚠ Safety

- Keep hands and other body parts out of the blade path.
- Never cut toward your body or work on an unsecured workpiece.
- Do not use a loose-handled or damaged draw knife.
- Keep the sharp edge covered when the tool is not in use.

Care & storage

- Remove wood residue, dry the blade, and apply suitable rust protection if required.
