Drawing Compass

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Drawing Compass

What it is used for

A drawing compass draws circles and arcs and transfers distances on paper or suitable drawing surfaces. Set the required radius carefully and keep the point and pencil secure.

How to use

1. Inspect the compass hinge, legs, needle point, and pencil holder for damage.
2. Loosen the adjustment screw and set the required distance between the point and pencil.
3. Tighten the screw so the selected radius remains fixed.
4. Place the needle point on the marked centre of the circle.
5. Hold the compass vertically and rotate it smoothly to draw the circle or arc.
6. Check the shape and radius, then adjust the compass if needed.
7. Close or cover the point and store the compass safely after use.

⚠ Safety

- Keep the sharp needle point away from fingers and eyes.
- Do not leave the compass open where someone may touch the point accidentally.
- Avoid excessive force that may break the pencil lead or damage the paper.

Care & storage

- Wipe the compass clean, protect the needle point, and store it in its case.
