Drill Guide

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Hand drill guide

What it is used for

A hand drill guide helps keep a drill aligned at the required angle and position. Secure the workpiece and use the guide to improve drilling accuracy.

How to use

1. Inspect the guide, bushings, clamps, and adjustment parts for damage.
2. Select a guide bushing suitable for the drill bit diameter.
3. Mark the drilling point and secure the workpiece firmly.
4. Position the guide over the mark and align it to the required angle.
5. Clamp the guide securely so it cannot shift during drilling.
6. Drill slowly while maintaining alignment and following the drill manufacturer's instructions.
7. Stop the drill, remove the guide, and inspect the hole.

⚠ Safety

- Wear safety glasses and keep hands away from the rotating bit.
- Secure loose workpieces before drilling.
- Do not adjust or reposition the guide while the drill is running.
- Keep clothing, hair, and cables away from rotating parts.

Care & storage

- Remove chips, clean the guide, and store it in a dry place.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
