Dumpy Level

Category: **Measuring & Marking Tools** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Dumpy Level

What it is used for

A dumpy level is used with a staff to determine differences in elevation and establish level points on a site. Set it up securely and take readings carefully to reduce measurement errors.

How to use

1. Inspect the instrument, tripod, levelling screws, and staff for damage.
2. Set the tripod on firm ground and mount the dumpy level securely.
3. Use the levelling screws and bubble to level the instrument.
4. Focus the eyepiece and objective until the crosshairs and staff image are clear.
5. Position the staff vertically at the required survey points.
6. Take and record staff readings, following the survey procedure and calculation method.
7. Pack the instrument carefully after completing the measurements.

⚠ Safety

- Keep the tripod stable and away from vehicle paths and excavation edges.
- Never look directly at the sun through the telescope.
- Carry the instrument securely and avoid touching exposed optical surfaces.

Care & storage

- Clean lenses with suitable lens tissue and store the instrument in its protective case.
