Exhaust System

Category: **Automotive** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Emission and exhaust system

What it is used for

An automotive exhaust system carries engine exhaust gases away and may include components that reduce emissions and noise. Inspect it according to the vehicle service manual and repair faults safely.

How to use

1. Park the vehicle in a well-ventilated service area and apply the parking brake.
2. Allow the exhaust system to cool before inspection.
3. Inspect pipes, joints, hangers, muffler, and emission-control components for leaks or damage.
4. Check for unusual noise, visible corrosion, loose fittings, or warning indicators.
5. Use approved diagnostic equipment and service procedures when checking emissions or sensors.
6. Repair or replace faulty components according to the service manual.
7. Run the vehicle only when safe and verify that no exhaust leaks remain.

⚠ Safety

- Never run an engine in an enclosed or poorly ventilated area due to carbon monoxide risk.
- Do not touch hot exhaust pipes, catalytic converters, or related components.
- Use suitable eye protection and gloves during inspection.
- Do not bypass or remove required emission-control equipment.

Care & storage

- Inspect exhaust joints and mounts periodically and follow the vehicle's maintenance schedule.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
