Eye Shield

Category: **Safety & PPE** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Eye-caps/shield

What it is used for

An eye shield protects the eyes from specified splashes, particles, or other workplace hazards when suitable for the task. Select the correct protection type and inspect it before use.

How to use

1. Identify the hazard and select an eye shield rated for that task.
2. Inspect the shield for cracks, scratches, loose fittings, or damaged straps.
3. Clean the shield using the manufacturer's approved method before wearing it.
4. Position the shield securely so it covers the required eye area.
5. Check that it fits properly and does not obstruct safe vision.
6. Wear it throughout the task and replace it if visibility or protection is compromised.
7. Clean and store the shield after use.

⚠ Safety

- Use a shield appropriate to the hazard; it may not replace safety goggles or glasses.
- Do not use cracked, badly scratched, or poorly fitting protection.
- Keep the shield in place while exposure hazards remain.
- Follow workplace PPE rules and the manufacturer's limitations.

Care & storage

- Clean with compatible materials and store in a protective case away from heat and chemicals.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
