GPS Module

Category: **Drones & Aviation** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: GPS Module

What it is used for

A GPS module receives satellite signals to estimate position, speed, and time for compatible electronic or drone systems. Install it securely and verify signal reception before operation.

How to use

1. Check the module, antenna, connectors, and mounting hardware for damage.
2. Confirm electrical voltage, interface, and compatibility with the host device.
3. Switch off the host system before connecting the module.
4. Mount the module and antenna according to the manufacturer's orientation requirements.
5. Connect the specified power and data interfaces securely.
6. Power on the system and allow time for satellite acquisition.
7. Verify position and signal status using the approved software or display.

⚠ Safety

- Use the specified voltage and correct connector polarity.
- Keep the antenna clear of obstructions and sources of electrical interference.
- Do not handle exposed circuits while powered unless designed for it.
- For drones, complete GPS checks before flight and follow applicable flight rules.

Care & storage

- Keep connectors clean and dry, and protect the antenna and module during storage.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
