Grow Light

Category: **Agriculture & Gardening** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Grow lights

What it is used for

A grow light supplies artificial light to support plant growth when natural light is insufficient. Set the light intensity, distance, and duration according to the plant and equipment specifications.

How to use

1. Inspect the light, power cable, mounting bracket, and timer for damage.
2. Identify the plant type and recommended light intensity and daily exposure duration.
3. Mount the grow light securely at the recommended distance from the plants.
4. Connect the light to a suitable power source and set the timer if available.
5. Switch on the light and verify even coverage across the growing area.
6. Monitor plant response, temperature, and moisture during use.
7. Switch off and disconnect power before repositioning or cleaning the unit.

⚠ Safety

- Keep water away from electrical connections and use equipment rated for the growing environment.
- Do not stare directly into high-intensity grow lights.
- Prevent overheating by maintaining the recommended clearance and ventilation.
- Do not overload outlets or extension leads.

Care & storage

- Clean the light surface when powered off and inspect cables and mounts regularly.
