Hatchery Jar

Category: **Animal Husbandry & Dairy** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Hatchery jars

What it is used for

A hatchery jar provides a controlled container for incubating or observing suitable aquatic eggs and larvae, depending on the system design. Maintain the required water conditions and follow the hatchery protocol.

How to use

1. Inspect the jar, lid, fittings, and support stand for cracks or leaks.
2. Clean and prepare the jar according to the hatchery sanitation procedure.
3. Position the jar securely and connect the specified water or aeration lines if required.
4. Fill with suitable conditioned water and verify temperature and water quality.
5. Introduce eggs at the recommended density and follow the species-specific hatchery protocol.
6. Monitor water flow, aeration, temperature, and egg condition at scheduled intervals.
7. Remove waste and transfer larvae only as directed by the hatchery procedure.

⚠ Safety

- Use clean equipment and follow biosecurity procedures to prevent contamination.
- Avoid overfilling or operating with leaking fittings.
- Keep electrical aeration equipment and connections protected from water.
- Handle eggs and larvae gently and follow species-specific welfare requirements.

Care & storage

- Clean and disinfect the jar between batches using approved methods, then rinse as required.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
