IP Phone

Category: **Telecom & Networking** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Communication systems such as VoIP phones and email management tools

What it is used for

An IP phone uses an internet protocol network to make and receive voice calls and may support messaging or directory features. Connect it to the approved network and verify its account and audio settings.

How to use

1. Inspect the phone, handset, cable, power adapter, and network port for damage.
2. Connect the phone to the approved Ethernet port or supported wireless network.
3. Provide power through the approved adapter or compatible Power over Ethernet connection.
4. Follow the organization's setup instructions to configure the extension or service account.
5. Check network status and confirm that the phone has registered successfully.
6. Make a test call and verify microphone, speaker, and call quality.
7. Sign out or secure the phone when required and report connection problems.

⚠ Safety

- Use only authorized network credentials and approved device configurations.
- Do not share passwords or expose confidential call information.
- Keep liquids away from the phone and electrical connections.
- Follow organizational privacy and acceptable-use policies when using communication tools.

Care & storage

- Clean the handset and keypad with approved materials and keep cables and firmware maintained.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
