Insulated Rescue Pole

Category: **Safety & PPE** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Insulated rescue pole

What it is used for

An insulated rescue pole is designed to help trained personnel move a person or object away from an electrical hazard while maintaining an appropriate separation distance. Use only a correctly rated pole under the approved emergency procedure.

How to use

1. Check the pole's voltage rating, inspection label, and service status before use.
2. Inspect the insulating surface for cracks, contamination, moisture, or other damage.
3. Confirm that the pole is suitable for the electrical hazard and rescue situation.
4. Wear the required electrical PPE and follow the emergency response procedure.
5. Maintain the specified safe approach distance and use the pole only as trained.
6. After the rescue, isolate the hazard if authorized and arrange medical assessment for the affected person.
7. Remove the pole from service if damaged and report the incident.

⚠ Safety

- Only trained and authorized personnel should use the rescue pole.
- Never use a wet, dirty, damaged, or unrated pole near electrical hazards.
- Do not assume the pole makes every electrical situation safe.
- Follow site emergency procedures and contact emergency services as required.

Care & storage

- Clean, inspect, and store the pole according to the manufacturer's instructions and applicable electrical safety standards.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
