Manual Transplanter

Category: **Agriculture & Gardening** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Manual transplanter

What it is used for

A manual transplanter places seedlings into soil at a controlled depth and spacing. Prepare the field properly and use the tool according to the crop and planting method.

How to use

1. Inspect the transplanter handle, planting mechanism, frame, and moving parts for damage.
2. Prepare moist, workable soil and mark the required planting spacing.
3. Select healthy seedlings suitable for the crop and planting stage.
4. Position the transplanter at the marked planting point.
5. Operate the planting mechanism to open the soil, place the seedling, and release it as designed.
6. Move to the next point while maintaining consistent spacing and planting depth.
7. Check the planted seedlings, clean soil from the tool, and store it after use.

⚠ Safety

- Wear suitable footwear and gloves when working in wet or rough soil.
- Keep fingers away from moving planting jaws or mechanisms.
- Do not force the tool in compacted soil or around hidden obstacles.
- Use safe lifting posture when moving the equipment.

Care & storage

- Wash off soil, dry metal parts, and inspect the planting mechanism before storage.
