Milk Storage Tank

Category: **Animal Husbandry & Dairy** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Milk storage tanks (50 liter)

What it is used for

A milk storage tank temporarily holds milk under controlled hygienic conditions before collection or processing. Clean and sanitize the tank correctly and maintain the required storage temperature.

How to use

1. Inspect the tank body, lid, outlet valve, seals, and temperature display for damage.
2. Clean and sanitize the tank using the approved dairy sanitation procedure.
3. Rinse if required by the cleaning chemical instructions and allow the tank to drain properly.
4. Verify that the tank is dry or prepared as specified and the cooling system is operational.
5. Transfer milk using clean, food-grade equipment and close the lid securely.
6. Monitor and record milk temperature and storage time according to dairy requirements.
7. Drain the tank after transfer and repeat the cleaning procedure before the next batch.

⚠ Safety

- Use only food-grade materials and approved cleaning or sanitizing chemicals.
- Follow chemical labels and wear the required protective equipment.
- Never enter the tank unless a formal confined-space procedure and authorization apply.
- Do not store milk outside the required temperature limits.

Care & storage

- Clean and sanitize after each batch and inspect valves, seals, and cooling equipment regularly.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
