Plyometric Box

Category: **Sports & Physical Education** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Plyometric Box

What it is used for

A plyometric box is used for supervised jump, step-up, and lower-body conditioning exercises. Choose a stable box height appropriate to the user's ability and maintain a clear landing area.

How to use

1. Inspect the box top, sides, base, and joints for damage or instability.
2. Place the box on a flat, nonslip surface with clear space around it.
3. Select a box height suitable for the user's fitness and skill level.
4. Warm up and demonstrate the correct landing and stepping technique.
5. Perform the selected exercise with controlled movement and stable foot placement.
6. Step down carefully when appropriate and allow sufficient recovery between repetitions.
7. Check the box and exercise area after use and return equipment to storage.

⚠ Safety

- Do not use a cracked, slippery, or unstable box.
- Keep the landing zone clear of people and obstacles.
- Avoid jumps beyond the user's ability and do not jump down unnecessarily from high boxes.
- Stop if pain, dizziness, or loss of balance occurs.

Care & storage

- Wipe the surface clean, check stability regularly, and store the box in a dry designated area.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
