Protective Guard

Category: **Safety & PPE** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Guard

What it is used for

A protective guard helps shield users from moving parts, flying debris, or other identified workplace hazards. Install and inspect the correct guard before operating the associated equipment.

How to use

1. Identify the hazard and confirm the guard type required for the equipment.
2. Inspect the guard, mounting points, fasteners, and locking features for damage.
3. Switch off and isolate the equipment before fitting or adjusting the guard.
4. Install the guard according to the manufacturer's instructions and secure all fasteners.
5. Check that the guard covers the hazard without obstructing intended operation.
6. Restore power only after confirming the guard is correctly fitted and secure.
7. Report damaged or missing guards and prevent operation until corrected.

⚠ Safety

- Never operate equipment with a required guard removed or bypassed.
- Keep hands and clothing away from hazardous moving parts.
- Do not modify the guard without approved authorization.
- Follow lockout procedures before maintenance or guard adjustment.

Care & storage

- Clean the guard regularly and inspect its fixings and condition before use.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
