Sample Collection Tool

Category: **Laboratory Instruments & Glassware** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Sample collection tools (where permitted)

What it is used for

Sample collection tools are used to collect permitted specimens or environmental materials for testing and assessment. Follow the approved collection protocol, contamination controls, and applicable permissions for the sample type.

How to use

1. Confirm the sample type, purpose, collection location, and required authorization.
2. Review the sampling protocol, hazard information, and required personal protective equipment.
3. Inspect collection tools and containers for cleanliness, integrity, and suitability.
4. Label the sample container with the required identification and collection details before or immediately after sampling.
5. Collect the sample using the approved technique while avoiding cross-contamination.
6. Seal and transport the sample under the specified temperature and handling conditions.
7. Decontaminate or dispose of used tools appropriately and complete the sample record.

⚠ Safety

- Collect only samples that are legally permitted and within your training and authorization.
- Use suitable PPE and follow biosafety or chemical safety procedures for the material.
- Never collect unknown hazardous material without an approved risk assessment and trained supervision.
- Handle sharps and potentially infectious samples using the designated precautions.

Care & storage

- Clean reusable tools according to the validated procedure and store them separately from clean supplies.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
