Sit and Reach Box

Category: **Sports & Physical Education** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Sit and Reach Box

What it is used for

A sit and reach box measures flexibility by recording how far a person can reach forward while seated. Use the same standardized posture and instructions for each test to support consistent results.

How to use

1. Inspect the box, measuring scale, sliding indicator, and base for damage.
2. Place the box on a flat, nonslip surface and align it securely.
3. Explain the test and demonstrate the required seated position.
4. Ask the participant to remove shoes if required by the testing protocol and sit with legs extended.
5. Position the feet against the designated surface and keep knees straight without forcing them.
6. Have the participant reach forward smoothly and hold the furthest comfortable position briefly.
7. Record the reading, allow recovery, and clean the equipment after testing.

⚠ Safety

- Do not force a stretch or bounce toward the measurement point.
- Stop if pain, dizziness, or unusual discomfort occurs.
- Adapt or avoid the test when contraindications or mobility limitations require professional advice.
- Keep the test area clear to prevent slips or falls.

Care & storage

- Wipe contact surfaces after use and store the box in a dry, protected area.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
