Smoke Detector

Category: **Safety & PPE** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Smoke Detectors

What it is used for

A smoke detector identifies smoke and provides an audible or connected alarm to warn occupants of a possible fire. Test and maintain the detector according to the manufacturer's instructions and local fire safety requirements.

How to use

1. Inspect the detector housing, mounting, indicator, and surrounding area for damage or obstruction.
2. Confirm the detector type and check the installation location against the approved fire safety plan.
3. Check the power source and replace batteries if required by the instructions.
4. Use the designated test function to verify the alarm and connected notification system.
5. Confirm that the alarm can be heard or received in the intended area.
6. Record the test result and report any fault or failed alarm.
7. Reset the detector if required and ensure it returns to normal status.

⚠ Safety

- Never disable a smoke detector without authorized controls and an approved alternative fire safety arrangement.
- Do not test with open flames or unapproved smoke sources.
- Follow electrical isolation procedures before servicing hardwired detectors.
- Treat any genuine alarm as an emergency and follow evacuation procedures.

Care & storage

- Keep vents free of dust, follow scheduled cleaning, and replace the detector at its specified service life.
