Solar Dryer

Category: **Solar, Power & Energy** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Solar dryers

What it is used for

A solar dryer uses solar heat and airflow to reduce moisture in suitable agricultural or food products. Follow the approved drying conditions for the product to maintain quality and prevent contamination.

How to use

1. Inspect the dryer enclosure, transparent cover, trays, vents, and airflow components.
2. Place the dryer in a sunny, well-ventilated location according to its design.
3. Clean and dry all product-contact surfaces before loading.
4. Prepare the product uniformly and arrange it in a single suitable layer on the trays.
5. Adjust vents or airflow controls according to the manufacturer's instructions.
6. Monitor temperature, drying progress, and product condition at the required intervals.
7. Remove adequately dried product, protect it from recontamination, and clean the dryer.

⚠ Safety

- Do not exceed the recommended product temperature or drying conditions.
- Use heat-resistant gloves when handling hot trays or surfaces.
- Keep the dryer away from fire hazards and protect it from strong winds if required.
- Follow food hygiene requirements and do not use spoiled or contaminated raw material.

Care & storage

- Clean trays and vents after use and inspect the cover and airflow paths regularly.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
