Spokeshave

Category: **Hand Tools - Cutting & Shaping** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Spokeshave

What it is used for

A spokeshave trims and shapes wood by removing thin shavings from curved or flat surfaces. Adjust the blade carefully and secure the workpiece before making controlled passes.

How to use

1. Inspect the spokeshave body, handles, blade, and adjustment screws for damage.
2. Secure the wood firmly on a stable workbench or suitable holding fixture.
3. Check blade sharpness and adjust the blade projection for a light cut.
4. Hold both handles securely and align the tool with the intended cutting direction.
5. Make controlled passes along the grain where appropriate and inspect the surface frequently.
6. Adjust blade projection gradually if the cut is too heavy or uneven.
7. Remove shavings, clean the tool, and store it with the blade protected.

⚠ Safety

- Keep fingers away from the blade edge and cutting path.
- Wear safety glasses and avoid loose clothing near the workpiece.
- Do not cut toward the body or use a poorly secured workpiece.
- Do not adjust or clean the blade while the tool is moving.

Care & storage

- Remove wood shavings after use, protect the blade from corrosion, and store the tool dry.
