Surge Protector

Category: **Electrical & Electronic Components & Kits** Type: **Short SOP** Priority: **Medium**

1 labs

Covers these lab items: Surge Protectors

What it is used for

A surge protector helps protect compatible electrical equipment from transient voltage surges. Check its rating and condition, then connect it according to the manufacturer's electrical safety instructions.

How to use

1. Inspect the surge protector, plug, cable, outlets, indicator lights, and casing for damage.
2. Confirm the voltage, current, and load ratings are suitable for the equipment.
3. Plug the protector directly into an appropriate grounded outlet as specified.
4. Connect compatible equipment without exceeding the rated load.
5. Check the status indicator and confirm the protector is operating normally.
6. Arrange cables neatly and keep the unit ventilated during operation.
7. Disconnect equipment safely and replace the protector if its protection status indicates failure.

⚠ Safety

- Do not use a cracked, wet, overheated, or damaged surge protector.
- Never exceed its rated load or daisy-chain multiple power strips.
- Keep the unit away from water and heat sources.
- Do not assume every surge protector provides backup power or protects against all electrical faults.

Care & storage

- Keep outlets free of dust and inspect cables and protection indicators regularly.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
