Training Arch

Category: **Sports & Physical Education** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Training Arch

What it is used for

A training arch provides a target or passage for agility, coordination, and movement exercises. Set it up securely in a clear area and adapt its position to the participants and activity.

How to use

1. Inspect the arch, base, joints, and fastening parts for cracks or deformation.
2. Choose a flat surface with sufficient clearance around the arch.
3. Assemble the arch according to the manufacturer's instructions.
4. Secure the base and check that the structure remains stable when lightly tested.
5. Explain the activity and demonstrate safe movement through or around the arch.
6. Monitor participants and reposition the arch if it shifts or creates a hazard.
7. Disassemble, clean, and store the arch after use.

⚠ Safety

- Do not use a cracked, unstable, or poorly assembled arch.
- Keep adequate spacing between participants to prevent collisions.
- Do not hang or climb on the arch unless specifically designed for that purpose.
- Keep the exercise area clear of obstacles and slippery materials.

Care & storage

- Clean the arch after use and store its components in a dry, protected location.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
