Transfer Forceps

Category: **Medical, Healthcare & First Aid** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Transfer forceps

What it is used for

Transfer forceps are used to grasp and transfer suitable items or materials in healthcare and laboratory settings. Select the correct forceps type and follow the required hygiene or sterilization procedure for the intended use.

How to use

1. Inspect the forceps tips, hinge, alignment, and grip for damage or contamination.
2. Confirm the forceps are appropriate for the task and intended contact type.
3. Perform hand hygiene and wear the required protective equipment.
4. Sterilize or disinfect the forceps as required by the procedure and manufacturer.
5. Grip the item gently and transfer it without touching unintended surfaces.
6. Place the transferred item in the designated location and avoid cross-contamination.
7. Dispose of single-use forceps or reprocess reusable instruments according to policy.

⚠ Safety

- Use sterile forceps for procedures requiring sterility.
- Do not use damaged, corroded, or contaminated forceps.
- Never reuse single-use instruments.
- Follow infection-control procedures and approved clinical protocols.

Care & storage

- Clean, disinfect, or sterilize reusable forceps according to the instrument instructions and facility policy.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
