Vehicle Chassis

Category: **Automotive** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: TATA ACE – Chassis with Axle and wheels

What it is used for

A vehicle chassis with axle and wheels demonstrates the vehicle's basic structural layout and running gear. Use it for supervised automotive training, inspection, and component identification on a stable support.

How to use

1. Confirm the chassis identity and inspect the frame, axle, wheels, suspension, and mounts for damage.
2. Position the chassis on a stable, level workshop floor or approved support stand.
3. Secure the assembly against rolling or tipping before starting the inspection.
4. Identify major components and explain their functions using the relevant service information.
5. Inspect visible fasteners, joints, and suspension parts without removing safety-critical components unnecessarily.
6. Demonstrate basic inspection points and record any observed defects.
7. Clean the training area and return tools to storage after the session.

⚠ Safety

- Never work beneath a chassis supported only by a jack.
- Use wheel chocks and approved stands to prevent movement.
- Keep hands clear of pinch points and suspended components.
- Do not operate or move the chassis unless all required systems and safeguards are in place.

Care & storage

- Keep the frame and components clean, protect exposed metal from corrosion, and report defects promptly.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
