Winnowing Fan

Category: **Agriculture & Gardening** Type: **Short SOP** Priority: **Medium** 1 labs

Covers these lab items: Winnowing fans

What it is used for

A winnowing fan uses airflow to separate lighter chaff and debris from heavier grains or seeds. Operate it on a stable surface and adjust airflow to suit the crop and material condition.

How to use

1. Inspect the fan, blades, guards, handle or motor, and frame for damage.
2. Place the equipment on a stable surface in a well-ventilated work area.
3. Confirm the crop or seed material is suitable for the winnowing process.
4. Prepare a clean collection tray or containers for grain and separated debris.
5. Operate the fan according to its design and feed material gradually into the airflow.
6. Adjust airflow or material position until separation is effective without excessive grain loss.
7. Switch off the fan, collect separated materials, and clean the equipment.

⚠ Safety

- Keep hands, clothing, and loose objects away from moving blades.
- Use a guard and never operate equipment with exposed rotating parts.
- Wear suitable respiratory protection when dust levels require it.
- Disconnect power before clearing blockages or cleaning motorized equipment.

Care & storage

- Remove dust and crop residue after use and store the fan in a dry place.
