Milking Bucket

Category: **Animal Husbandry & Dairy** Type: **Short SOP** Priority: **Low** 3 labs

Covers these lab items: Milking bucket

What it is used for

A milking bucket collects milk during manual milking or approved dairy training activities. Maintain strict hygiene and use a clean, food-grade bucket to reduce contamination risk.

How to use

1. Inspect the bucket, handle, rim, and interior for damage, rust, or residue.
2. Wash and sanitize the bucket before milking.
3. Prepare a clean milking area and follow the required udder and teat hygiene procedure.
4. Position the bucket securely beneath the animal without touching contaminated surfaces.
5. Collect milk using hygienic milking technique and avoid introducing dirt or hair.
6. Transfer milk promptly to the approved storage container and maintain the required temperature.
7. Wash, sanitize, and dry the bucket immediately after use.

⚠ Safety

- Use only clean, food-grade buckets for milk collection.
- Keep the bucket away from manure, dirty bedding, and contaminated equipment.
- Handle animals calmly and follow safe milking practices.
- Do not use buckets with cracks, rust, or residues that cannot be removed.

Care & storage

- Clean promptly after milking and store inverted or covered in a clean, dry area.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
