Painting Edger

Category: **Construction & Masonry** Type: **Short SOP** Priority: **Low** 1 labs

Covers these lab items: Painting Edger

What it is used for

A painting edger helps apply paint neatly along corners, trim, and edges while reducing unwanted marks on adjacent surfaces. Use a clean edger and test the paint application before working on the finished surface.

How to use

1. Inspect the edger pad, rollers, handle, and frame for damage or loose parts.
2. Choose an edger suitable for the paint type and surface.
3. Prepare the surface by cleaning dust and protecting adjacent areas as required.
4. Load the pad or roller with a small amount of paint and remove excess.
5. Position the edger against the edge or trim and move it with steady pressure.
6. Check the finish and reload paint as needed without overloading the tool.
7. Clean the edger according to the paint manufacturer's instructions after use.

⚠ Safety

- Provide adequate ventilation when using paint and cleaning solvents.
- Wear suitable gloves and eye protection when required.
- Keep paint away from flames and follow the product safety label.
- Use a stable ladder or platform when working at height.

Care & storage

- Remove paint residue promptly and store the edger dry with the pad protected from deformation.

Disclaimer: This SOP is prepared from general information available on the internet. For detailed instructions, refer to the manufacturer's original manual / file.
